Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Information Disclosure Statement

The information disclosure statement (IDS) filed 7/1/2008 is being considered by the examiner. However, the International Search Report has not been considered by the Examiner, because it is an opinion and not a publication.

Specification

The incorporation of essential material in the specification by reference to an unpublished U.S. application, foreign application or patent, or to a publication is improper. Applicant is required to amend the disclosure to include the material incorporated by reference, if the material is relied upon to overcome any objection, rejection, or other requirement imposed by the Office. The amendment must be accompanied by a statement executed by the applicant, or a practitioner representing the applicant, stating that the material being inserted is the material previously incorporated by reference and that the amendment contains no new matter. 37 CFR 1.57(f).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4 and 6-22 are rejected under 35 U.S.C. 102(b) as being anticipated by US patent 6173998, Bock.

In regards to claims 1, 2, 4 and 6-22, Bock discloses a connection element (6) as part of a rapid connection unit for connection lines, comprising a tubular base body on which at least two two-armed snap elements are formed that are diametrically opposite one another, laterally spaced and each connected at a respective rocking point by an elastic connection piece to an outer wall of the base body and each comprise an inwardly directed hook that can reach behind capable of engaging a catch element on an outer wall of a counter piece of the rapid connection unit characterized in that wherein the snap elements comprise are designed as spring arms whose free ends are bent back and inward in such a manner that a gap is present between these free ends and opposed contact surfaces of the spring arms in an engaged position, the opposed contact surfaces limiting rocking movement of the snap elements such that inwardly directing hooks disengage the catch elements by of the arms.

Claims 1, 2, 4 and 6-22 are rejected under 35 U.S.C. 102(b) as being anticipated by US patent 5873610, Szabo.

In regards to claims 1, 2, 4 and 6-22, Szabo discloses a connection element (20) as part of a rapid connection unit for connection lines, comprising a tubular base body on which at least two two-armed snap elements are formed that are diametrically opposite one another, laterally spaced and each connected at a respective rocking point by an elastic connection piece to an outer wall of the base body and each comprise an inwardly directed hook that can reach behind capable of engaging a catch element on an outer wall of a counter piece of the rapid connection unit characterized in that

wherein the snap elements comprise are designed as spring arms whose free ends are bent back and inward in such a manner that a gap is present between these free ends and opposed contact surfaces of the spring arms in an engaged position, the opposed contact surfaces limiting rocking movement of the snap elements such that inwardly directing hooks disengage the catch elements by of the arms.

Response to Arguments

Applicant's arguments with respect to claims above have been considered but are moot in view of the new ground(s) of rejection.

Applicant requests that the specification objection be withdrawn, because explicit incorporation is unnecessary. The Examiner disagrees. The specification objection cannot be withdrawn, because Applicant has failed to remove incorporation language from the instant specification.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any

extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
